Re: 111 Cypress Street
Trash Management

This memo is to confirm that the design of the proposed Trash Room will be maintained in compliance with State Sanitary Housing Code requirements. In addition, the design of the room will include noise reducing components including “quiet rock”, resilient channels and other methods to minimize noise and vibration impacts produced by the compactor and related activity in the Trash Room. It should be noted that the only residential occupancy is above the room. There are no residents or occupied space adjacent to the room on the first floor.

Sincerely,

A handwritten signature in black ink that reads 'H.D. Strauch'.

Hans D. Strauch, Principal, LEED AP
