

1925 aerial fisher hill reservoir, brookline

Take-away Points from the February Meeting:

- Kite Hill 2 option was well received with a few suggestions made for minor changes
- Continued concern about pedestrian paths, ample buffer planting and proximity to abutters
- Request for more information about promenade and possible water feature
- Continue to be on the right track!

WOODLAND CANOPY

beech

oak

birch

hickory

black gum

yellowwood

maple

ironwood

catalpa

- tallest species of woodland
- arrangement & density affects light permeability to lower layers
- mature trees important for many bird species
- dead & decaying trees also important habitat resource

WOODLAND CANOPY

WOODLAND UNDERSTORY

witch hazel

redbud

sassafras

dogwood

shadbush

hornbeam

- smaller trees and very large shrubs
- found beneath canopy level, especially at woodland edges or openings in canopy
- increases diversity of canopy structure
- provides cover and habitat for birds

WOODLAND UNDERSTORY

WOODLAND DECIDUOUS SHRUBS

fothergilla

blueberry

choke berry

winterberry

viburnum

gray dogwood

- typically found along edges or in breaks in canopy
- provides shelter for wildlife including birds and rabbits
- many species produce berries that are important wildlife food source

WOODLAND DECIDUOUS SHRUBS

WOODLAND EVERGREEN SCREENING

spruce

cedar

white pine

red cedar

- evergreens provide cover and habitat for wildlife
- year-round visual screening at woodland park edges

WOODLAND EVERGREEN SHRUBS

- provides shelter for wildlife including birds and rabbits
- year-round visual screening at woodland park edges

WOODLAND EVERGREEN SCREENING & SHRUBS

Fisher Hill Reservoir, Brookline

Public Meeting #6 21 March 2012

WOODLAND HERBACEOUS LAYER

cinnamon fern

sensitive fern

sedges

lady fern

wood aster

ostrich fern

- found at woodland floor level
- shade tolerant
- contribute to visual interest at ground level

WOODLAND HERBACEOUS LAYER

MEADOW

- provides habitat for butterflies and meadow bird species
- increases diversity of habitat types
- colors and texture vary over seasons

MEADOW

Fisher Hill Reservoir, Brookline

Public Meeting #6 21 March 2012

WET MEADOW & BORDERING UPLAND

shadbush

viburnum

elderberry

swamp azalea

spicebush

summersweet

milkweed

rushes

joe-pye weed

- acts as environmental filter for stormwater
- cover and foraging habitat for birds and other wildlife
- increases diversity of habitat types in park

WET MEADOW & BORDERING UPLAND

SPECIMEN TREE

- visual focal point in open area
- mature trees provide habitat for birds
